Module 1	Network Components/ Types of Networks
Network Components(End devices/ Intermediary devices/Media) Network Topologies(Physical & Logical Topologies) Common Types of Networks (LAN and WAN)	
Module 2	**Switch Configuration Worksheet**
Configuration Modes Command to set Hostname Command to set banner or message during log in Commands to view the configuration details of the IOS Device.(RAM) Command to view the configuration contents of the NVRAM of the IOS Device. Command to save the running configuration on to startup configuration. Command the set Console password Set password for secure privileged EXEC access Set vty password for Remote access or telnet access Command to secure the passwords by encrypting them Assign an IP address and a subnet mask to switch Assign default gateway to switch.	
Module 3	**Reference Models - Layers and PDU**
Models/ Layer Description/ PDU/ Protocols Logical and Physical addresses in frames Other definitions	
Module 4	**Types of media/ features/ connectors**
Twisted pair Cables – features/ advantages/ disadvantages – Types and Connectors for each Fiberoptic – features/ advantages/ disadvantages – Types and Connectors for each Wireless – features/ advantages/ disadvantages – devices for wireless access Other definitions.	

Fill the following :

OSI LAYER

Layers	Description	PDU	Protocols
7.			
6.			
5.			
4.			
3.			
2.			
1.			

MID EXAM REVIEW SHEETS

Select the correct option.

Statement	Option 1	Option 2
LAN has a higher data transfer rate, whereas WAN has a lower data transfer rate.	True	False
Twisted pair cables are made of this material	Copper	Glass
TCP/IP model has _____layers.	4	5

Write the differences between

IPv4	IPV6
LAN	**WAN**
Logical Topology	**Physical Topology**

Given the Network, Answer the following questions:

How many Networks?

How many LANS?

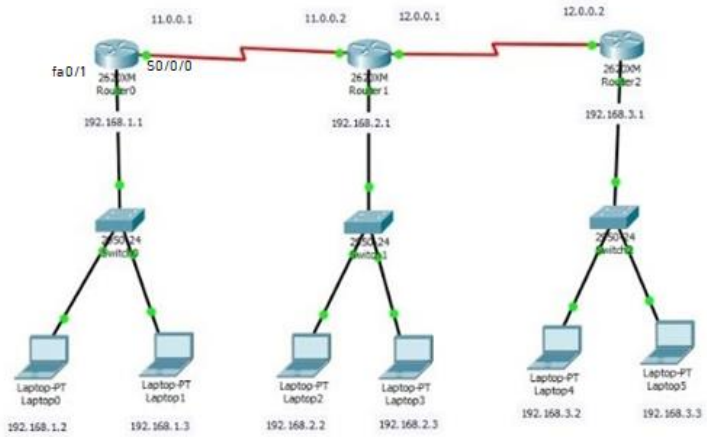
How many WANS?

How many Intermediary devices?

How many End Devices?

What is the IP address of Laptop3?

What is the default gateway for laptop5?

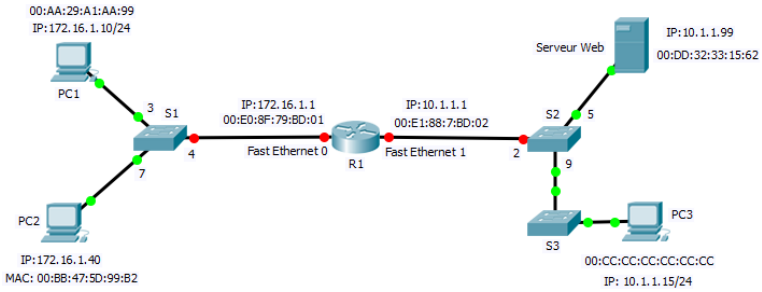


For switch write the commands in the proper prompt

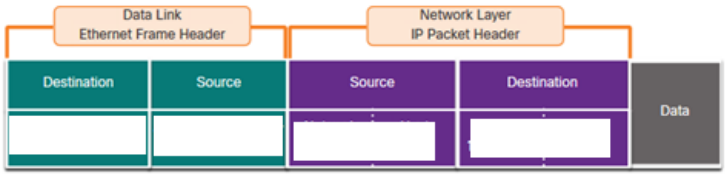
Save the running configuration to NVRAM	
Display the current (running) configuration file	
Configure an IP address & activate interface	
Set a password 567 to protect the privileged executable mode.	
Encrypt all the service passwords used in Switch	
Secure the switch from console access using the password 123	
Set the remote access password as abc.	
Save the configuration file from RAM to NVRAM	
Set a message that can be seen by anyone who attempts to log in	

MID EXAM REVIEW SHEETS

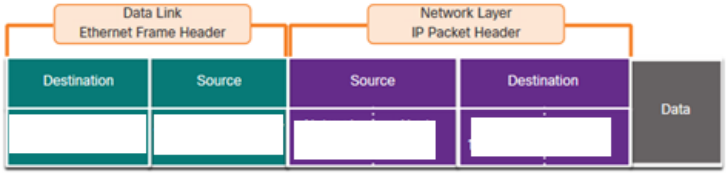
Fill in the frame information in each of these cases.



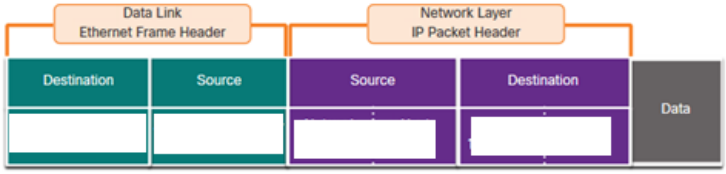
A. PC1 is sending data to PC2.



B. PC1 is sending data to PC3.



C. PC1 is sending data to PC3 and the frame just left router R1.



Read the description and match the proper media type based on it.

Description
This cable uses electricity and is affected by EMI and RFI.
This type of media is transmitted through radio signals
This type of media uses a laser or LED to encode bits as pulses of light.

Type of media
Wireless
Fiber optic Cable
Copper cable
