Module1 & 2 Revision questions

All of the given below are intermediary devices, except one.

Firewall

Switch

Router

Server

All of the given below are end devices, except one.

Laptop

IP Phones

Wireless access points

PCs

…….. Is a network media, which transmitted data signals using pulses of light.

Wireless

Fiber Optic cable

Copper cable

None of the these

…….. Is a network media, which transmitted data signals using electrical impulses.

Module1 & 2 Revision questions

Wireless

Copper cable

Fiber Optic cable

None of the these

All the given bellow are advantages of Peer to Peer network, except one:

Easy to set up

Less complex

Not a secure

Lower cost

Analyze the signals given in the following table and identify the type of the cable.

Signal	Type of Cable
	.....Copper.....

Module1 & 2 Revision questions

	.....Fiber optic.....
	...Wirelss..... .....

Refer to the exhibit & Identify the missing common types of networks and the levels of access for different groups of a company:

	A. .....Internet.....
	B. .....Extranet.....
	C: .....Intranet.....

..... often called topology diagrams, use symbols to represent devices within the network.

Network diagrams

Physical Port

Module1 & 2 Revision questions

Interface
All of them

Drag and drop the proper items that fits the given network type:

Type	Description
LAN	covers network in samll area, Connects end devices, Connects PCs in college
WAN	covers networks in large area, interconnects networks, interconnects company branches

Connects end devices

interconnects networks

connects one PC only

Connects PCs in college

covers network in samll area

covers networks in large area

interconnects company branches

seperate network traffic

Which of the following best fits the physical topology? (select two)

- [ ] Shows port numbers
- [ ] Shows cable installation of the network
- [ ] Shows Location of devices
- [ ] Shows interfaces address
- [ ] Shows ports configuration

Which of the following best fits the Logical topology? (select two)

Module1 & 2 Revision questions

- [ ] Shows Location of devices
- [ ] Shows ports configuration
- [ ] Shows port numbers
- [ ] Shows interfaces address
- [ ] Shows cable installation of the network

Read the given scenario and answer the given questions:

A product supplier is authorized to access a company network.

-Identify the network type: Extranet

-Identify the access type: secure access

Read the given scenario and answer the given questions:

A customer is using the coffee shop wifi network to browse the internet.

-Identify the network type: Internet

-Identify the access type : public access

Based on the scenario given, identify the type of network.

1. You are booking online air ticket for Salalah: Internet
2. Only students and staff of UTAS can access the E-Learning portal: Intranet

Compare LAN and WAN and choose correct description, based on the type of network given:

1. LAN : Answer 1 Question 1

It is usually administered by a single organization or individual.

2. WAN : Answer 2 Question 1

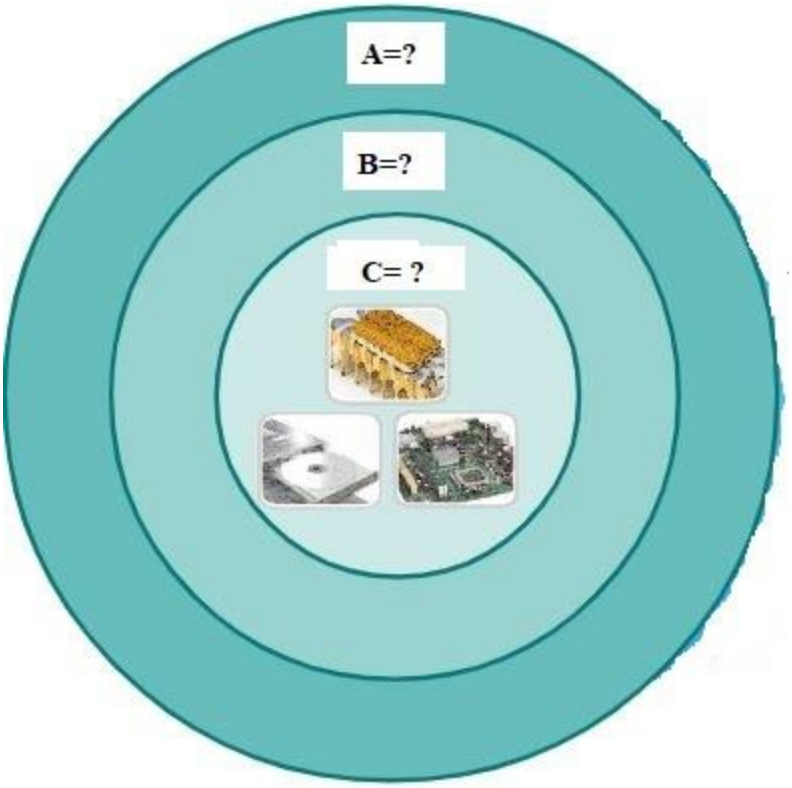
It is managed by multiple service providers (SPs) or Internet Service Providers (ISPs).

Module1 & 2 Revision questions

Chapter2:

Refer to the exhibit:

Module1 & 2 Revision questions



Identify missing part "A" of Operating System?

Question 1Select one:

- Shell
- Hardware
- ROM
- Kernel

Which access method is suitable, you were in the equipment room with a new switch that needs to be configured?

Module1 & 2 Revision questions

Question 1Select one:

Console

AUX

Secure Shell (SSH)

Telnet

Which access method is suitable, you want to securely accessing the switch remotely in a branch located in different city?

Question 1Select one:

Telnet

Secure Shell (SSH)

Console

AUX

Identify the following from the given command:

Switch-Dep1#show ip interface brief

prompt : ... Switch-Dep1#.....
command : ... show .....

Identify the following from the given command:

Switch-IT#show running-config

Module1 & 2 Revision questions

prompt : ... Switch-IT#.....
command ... show .....

show running-config Switch-IT#

Match the following IOS modes with their appropriate name.

Switch(config-line)# Line sub-configuration mode

Switch> User EXEC Mode

Refer to the different types of modes, match the default device prompts with names of the command modes ?

1. Switch> .....User Exec Mode.....
2. Router(config-if)# .....line – Sub Configuration mode.....
3. Router(config)# .....Global Configuration Mode.....
4. Switch# ...Privilege Exec mode.....

User Exec Mode | Global Configuration Mode | Line Configuration Mode | Privileged EXEC Mode

Write command to secure user exec mode:

Switch > enable

Switch# Configure terminal

Switch (Config)# line console 0

Switch (Config – if)# password Cisco123

Switch (config-if)# login

Switch (Config)# exit

Command to secure privilege exec mode – Un – encrypted password:

Switch (Config)# enable password Cisco1234

Module1 & 2 Revision questions

Command to secure privilege exec mode — encrypted password:

Switch (Config)# enable secret Cisco1234

Identify the commands based on the description given:

1. Command to move from global configuration mode to privilege mode:
2. Configure name of switch as S1-417 :
3. Command to encrypt all plain text passwords :
4. Which line you will configure for securing telnet access :

Identify the modes of IOS operation:

1. S1(config)# : Answer 1 Question 1 [Global Configuration mode]

2. S1(config-if)# : Answer 2 Question 1 [Interface sub-configuarion mode]

Analyze the symbol given below and identify the device and its category

Symbol	Device	Device Category
	Answer 1 Question 1	Answer 2 Question 1
	Answer 3 Question 1	Answer 4 Question 1

Analyze the given command and identify its parts:

Switch# show vlans

Module1 & 2 Revision questions

1. show : command

2. Switch# : prompt

Identify the modes of IOS operation:

1. S1# : Answer 1 Question 1 Privilege exec mode

2. S1(config-line)# : Answer 2 Question 1 Line sub-configuarion mode
