As requested I researched buying new cameras to find out which one would be better for our studio. The two cameras that I have invistigated are Optishot and pixel master 200. I will recommended one based on three features which are performance, features and customization

performance

Concerning(as for) the performance the Optishot camera has 24 megapixel , however the pixel master has 36 megapixel which is considered good to our studio

As for the taking photos, Optishot camera can take up to 10 photos on the other hand the pixel master can take up to 30 photos per second.

About the battery life , both of them have 18 hours battery life.

Customization

Considering the lenses, the Optishot camera have 15 interchargable lenses, however the pixel master have only 12 lenses.

The Optishot camera does not include a bag, while the pixel master does come with a bag, which is a good thing for carrying the accessories of the camera.

Regarding to the prices, the Optishot camera is 410 OMR, on the other hand the pixel master is a little bit cheaper with cost of 385 OMR.

Recommendation

I would recommended we choose pixel master 200 because it's performance and features suits our studio.it has the required functions for our photographers. Furthermore the price of 10 pixel master cameras 3850 OMR and it is within the budget. the only weakness compared to the Optishot is that the lenses are regular not interchargable. However regular lenses are totally fine for our photographers
